建筑物沉降观测方案的设计与数据分析

杨建荣,邓太平,魏良帅
（四川省地质工程勘察院, 四川 成都 610072）

摘要: 概述了位于成都市龙泉驿区龙工南路的蔚蓝花城13号楼沉降观测工程基本情况, 简单介绍了该楼点位布设及观测周期等情况, 其中就基准点的布设和基准网稳定性做了详细论述, 并由观测数据结合曲线图分析了该建筑的形变情况并作出相应结论。

关键词: 沉降; 基准点; 数据分析

随着社会的不断进步, 物质文明的提高以及建筑设计施工技术水平的成熟完善; 土地资源日渐减少与人口增长之间的矛盾日益突出, 高层及超高层建筑物越来越多。为了保证建筑物的正常使用寿命和建筑物的安全性, 并为以后的勘察设计施工提供可靠的资料及相应的沉降参数, 建筑物沉降观测的必要性和重要性愈加明显。

1 工程概况

蔚蓝花城位于成都市龙泉驿区龙工南路, 住宅楼30幢, 其中13号楼高24层, 监测工作中共设3个水准基点, 9个观测点, 观测工作自2006年11月至2008年9月, 观测历时45个月, 共观测了11个周期。

2 水准网布设及稳定性监测

(1) 首先建立水准基准网, 采用独立高程系, 由以下3个水准基点构成水准闭合环, 每次观测平差后的数据较差均小于高程中误差的2倍; 并以基准点BM-1高程假设为500 000.000 mm来推算另外2个基准点的高程, 见表1。

<table>
<thead>

</tr>
<tr>
<td>BM-3</td>
<td>500 506.527</td>
</tr>
</tbody>
</table>

(2) 水准基准网、沉降水准网，采用自由网和非自由网的方式, 为提高网的内可靠性和外可靠性, 又采用拟稳平差和非自由网平差处理, 尽可能地削弱粗差和平差函数存在的模型误差对精度的影响。

3 沉降点的埋设能够反映荷载在空域中的变化。为提高沉降点的高程精度, 于2006年11月进行初始值观测后, 于2007年7月对水准基点进行了1次检测工作, 其检测及稳定分析结果见表2, 每次水准基点稳定性检测工作完成后, 及时对非稳定的水准基点的高程值进行修改处理, 为观测数据的准确性提供了可靠依据, 由表2可见各水准基准点是稳定可靠的。

</tbody>
</table>

在基准网的基础上建立以9个沉降点组成的沉降水准网(见图1), 以基准网为高程起算依据, 计算沉降网各点的高程, 并以各沉降点第一周期的高程值为起点推算以后各周期的沉降量和沉降速率, 由于该网以结点的形式布网和观测, 故而平差后的高程中误差较为均匀, 对于描述大楼的垂直形变, 有了更可靠的精度保证。
3 监测数据及变形分析

2006年11月至2008年9月观测期间，最大累计沉降量为6.595 mm（8#观测点），最小累计沉降量为5.303 mm（6#观测点），最大沉降差为1.292 mm（6#观测点~8#观测点），见表3。

<table>
<thead>
<tr>

<td>5.552</td>
</tr>
</tbody>
</table>

(1) 在最近11个观测周期之间，即2006年11月~2008年9月，时间间隔为687天，其平均累计沉降量为

$$S_{平} = \frac{S_{13-1} + S_{13-2} + \ldots + S_{13-9}}{11} = 6.001 mm$$

平均沉降速度为

$$S_{平}/t = 6.001 mm/687d = 0.009 mm/d$$

见表4。

<table>
<thead>
<tr>
<th>点名</th>
<th>累计沉降速率/mm/d</th>

<tr>
<td>13-9</td>
<td>0.008</td>
</tr>
</tbody>
</table>

3）沉降量、荷载、时间(S-P-T)关系曲线图（见图2）分析，从沉降曲线的分布情况来看，所有沉降曲线较集中，表明在观测期间本栋建筑物的基础不均匀沉降现象不显著。

4 结语

经过对蔚蓝花城13号楼实地观测数据的计算与分析，可作出如下结论:

1) 根据对蔚蓝花城13号楼9个沉降点、11个观测周期结果来看：大楼随着增高荷载的加重，以及季节而引起的地下水交替变化，各点都在发生着变化，但这些变化趋势，基本一致说明是均匀变化。

2) 根据大楼各个方向沉降来看，大楼对地基的压力比较平衡，各沉降点的差异沉降很小，由此看来大楼的整体受力比较均匀。

3) 蔚蓝花城13号楼的平均沉降速率为0.009 mm/d，各沉降观测点位的沉降速率均较小，说明基础比较稳固、平衡。

4) 各沉降观测点位的累计沉降量均符合规范要求，未见沉降异常。

5) 建筑物未发现裂缝等异常。

6) 蔚蓝花城13号楼平均沉降速率为0.009 mm/d，达到《建筑变形测量规程》JGJ/T8-97规范规定：“沉降速率小于0.01-0.04 mm/d，可认为已进入稳定阶段。”

Application of ArcGIS Vector Data Spatial Analysis in Urban Apartment Selection

by YANG Jing

Abstract This study introduced the buffer analysis and overlay analysis in the spatial analysis of ArcGIS vector data. The two spatial analytic capabilities could be utilized to help potential buyers narrow down suitable zones by classifying different zones and analyzing the practical situation in choosing apartments in the urban areas.

Key words spatial analysis, buffer analysis, overlay analysis, zone classification

Issues of MapGIS to ArcGIS Data Conversion Process

by YANG Xiaochao

Abstract Spatial data conversion is an effective way to increase utilization and reduce duplicate collection of spatial data. Studying the spatial data format conversion can help to significantly improve work efficiency. This paper analyzed the characteristics of MapGIS, ArcGIS software, and explored the problems encountered during the conversion process. It especially analyzed the file correspondence conversion relationship between changes in properties of the field, Figure contour points, and found solutions. It made full use of two complementary advantages of software, so that to maximize sharing of data resources.

Development of Data Processing Systems for Total Station Memory Records Observations

by LIU Jiankai

Abstract In the process of traverse field observations, using the electronic record book for total station memory mode, againsting its data logging functions, we made the extract ion of lead observations, the secondary development of computing, and data processing corresponding. Full using of its code measurements function, we developed the data processing module, the extraction of data automatically and converted them to the standard adjustment file that adjustment software could recognize reduce labor intensity and the workload of outside the inside.

Contour Application in the Formation of Special Landscape Earthwork
Calculation Database by GUI Xiaomei

Abstract Combined with a detailed example of earthworks, it de-
scribed how to use the contour in the formation of special landscape
earthwork calculation database applications. The method exploited the
contour could quickly generate a lot of elevation characteristics of the
database to encrypt a particular landscape (such as shrimp ponds, fish
ponds, etc.) of elevation, making the value of earthwork estimates clo-
ser to actual value, assuring earth-moving calculation accuracy and
improving efficiency.

Establishment of Digital Elevation Model Based on Rules Grid
by SHEN Yingzheng

Abstract The digital elevation model based on rules grid and the ir-
regular triangle network digital elevation model are two kinds of main
structure. Based on rules grid digital elevation model (DEM) modeling
principle and method, this paper analyzed the influence, and establish-
ed DEM precision established model, realized the algorithm. The re-
sults showed that point-by-point admixture-frequency syntheses was
very flexible, high efficiency, interpolated accuracy

Key words digital elevation model, spatial interpolation, precision

Construction and Reform on Graduate Course of Image Processing and
Analysis

by JIA Yonghong

Abstract Image Processing and Analysis, since it won boutique grad-
cuate course of Wuhan University in 2006, is the first general educa-
tion course opened by school of remote sensing information and en-
ingineering school for the whole graduate students of surveying and ma-
ping. The construction and reform about teaching content, teaching
materials, teaching methods and means, cyber source were carried by
curriculum group. Its achievement had been used in the teaching prac-
tice and had obtained the fine teaching effect.

Key words Image Processing and Analysis, course construction,
teaching reform, general course
